

Case

(Type of animal.. sheep (ewe

: Clinical signs

. wool easily detached . ١

. coordination . ٢

circling . ٣

normal temperature . ٤

.. Test

This test discovered by Dr.Ihab.GH. Mhadi

He was prevent the animal from seen by closed its eyes to prevent any reflex get from eyes and we seen the animal circling during this test and this lead to suspected the diagnosis . either Coenoris Cerpralis or Hydatocyst in the brain

. This test and diagnosis and treatment happened during two months

: Therapeutics used*

these medicine used to make sure that the diagnosis either Coenoris Cerpralis or Hydatocyst. Cause we haven't other ways to detect the exact diagnosis just the PM because .the case is hopeless . The case has not responded to any of the subsequent drugs

.Oxytetracycline . ١

. Gentamycime . ٢

AD3. ٣

.Multivitamin . ٤

In last days the animal was recumbent on floor and this contact with rough place lead to * inflammation in the eye and swelling and after that there is increase in temperature and . suspected this fever result from eye inflammation

P.M

By: Dr.Ali Jasim & Dr.Haider Al_Badree

. Three cysts on the brain . ١

many cysts in abdominal cavity and . ٢

. specific mesentery of intestine

. No liver lesion . ٣
